

Action Trampolines and **Play Equipment**

Products and Pricing Brochure

Thank you for your interest in our range of wooden outdoor play equipment.

We offer an imaginative range of Playcentres, each designed to provide a comprehensive set of activities at a sensible price. Each model is complete right down to swing seats and without the need to spend further money on add-ons. We also offer an intelligent range of complementary extensions which allow alternative play activities, these may be added either at the time of the initial build or later as required.

Designed to blend into your garden, we use selected top grade pine (from managed European forests) and as few man-made materials as possible. The

seasoned timber is machined square, planed smooth with rounded edges and finished to within 1mm tolerances. All fixing holes and nut recesses are drilled before the timber is pressure-treated, using a non-toxic arsenic-free solution approved for children's playground equipment.

Safety is at the heart of our Playcentre design specification, with substantial timber sections used for the frames (70mm x 70mm) and swing-arm (90mm x 110mm) and strong railings around the platforms. Every model provides the minimum of a heavy-duty green wavy slide, substantial climbing frame and play platform, two swings with wooden seats, wooden roof and (apart from the Gate Lodge) a commando net. Included are all necessary fittings (galvanized

or stainless steel), galvanised swing hangers with low-noise nylon bearings, fasteners, detailed assembly instructions and even a drill-bit for preparing screw holes. Our products meet or exceed the British & European Safety Standard for Toys, EN71 and are designed to meet German TUV standards. Our pressure treatment is cadmium / chromium / arsenic free and approved for domestic and playground use.

INSTALLATION & ASSEMBLY:

Before purchasing or installing your PlayCentre measure your garden. An unobstructed safety area of about 1.5m should be left for safety and access, with a clear zone of about 2.0m to 2.5m in front and behind the swings.

All sections come flat-packed in manageable packages. Rather than use ground anchors, all structural beams such as frames and swing-arm supports provide an extra 30cm length to be buried in the ground. Building and installing your PlayCentre is best done with at least two people. You will also need some tools, in particular a 13mm & 17mm box or socket spanner, cordless drill / screwdriver, level and tape

measure. Build times are set out in the table on the back of this brochure and on our web site and assume a reasonably level garden and ground clear of rubble. NOTE: Wood is a natural product, and as such is subject to the influence of the moisture content of the air and ground. Sometimes surface cracks, splits or loose knots may appear but these will not result in weakening of structural stability. Such cracks and splits are more common in round section timber, another of the reasons we prefer machined sawn timber from larger trees.

CONFIGURATION & WARRANTY

Most of our Playcentres provide more than one configuration. We have provided plans with the dimensions of the various components to allow you to draw up alternative designs. Some changes are easy to achieve, others may require a small amount of input from yourself. Please consult your dealer or contact us direct if you wish to make major changes. We have the confidence and experience with our products to offer a no-quibble 10 year guarantee against rot and insect infestation on all timber sections. All ropes, accessories, slides and faulty workmanship are guaranteed for 1 year, subject to correct installation and normal use.

THE PRODUCT RANGE

ARUNDEL

ATJE 255

The Arundel offers a complete high quality wooden PlayCentre at the cost of a fully-featured steel climbing frame. The 90cm (3ft) square wooden wooden platform is reached by climbing up the wooden rungs or the 8 rung by 4 strand commando net. The tall swing arm has two adjustable wooden swings for children of all ages. The 3m (10ft) long green wavy slide is sturdy and provides loads of fun, whilst built into the base is a sandpit with two seats to add the finishing touch! This unit can also be specified without the swing-arm if space is at a premium (model ATJE 256). Extra play value can be provided with the addition of either the Assault Course on the end of the swing-arm, or the attachment of our Monkey Bars accessory.

ARUNDEL TWIN CENTRE

ATJE 254

One of our best-sellers, the Twin Arundel is built around two 90cm (3ft) square wooden platforms, connected by a 1.6m (63") long clatterbridge. Access to the towers can be by the wide wooden staircase, up the wooden rungs or using the 8 rung by 4 strand commando net. Extra play value can be provided with the addition of either the Assault Course on the end of the swing-arm, or the attachment of our Monkey Bars accessory. Depending on your garden layout, the swing arm, commando net and 3m (10ft) wavy green slide may be positioned off the two towers in a variety of ways. Beneath one of the towers is a sandpit with seats for little children. This PlayCentre offers the best value in terms of quality and features of any unit sold in the UK, at an unbeatable price.

YORK
ATJE 391

An exciting tower for younger children with multiple platforms and lots of variety. A short ladder reaches up to the first platform, 60cm (24") off the ground. 30cm (12") higher is another platform with a wooden climbing ramp back down to the ground and rope for fun and exercise. A further 30cm up is the third platform, hidden around the corner. The final platform leads to the 3m (10ft) wavy green slide. On one side of the tower attaches an 8 rung x 4 strand commando net. The swing arm on this PlayCentre is only 2.5m (98") high to allow the fitting of our 2-seater wooden jouster accessory in place of one swing. Extra play value can be provided with the addition of the Assault Course on the end of the swing-arm. This model is also available without a swingarm (ATJE 392).

GATE LODGE PLAYHOUSE
ATJE 471

The largest of our Playcentres, the Gate Lodge has no equal in terms of quality, features or price. This unit was designed to provide a get-away space for teenagers, a club-house for 12 year olds and a play-house for little ones, as well as a Playcentre with slide, swings and climbing face. The Gate Lodge measures 1.8m x 1.8m (6ft x 6ft) with an interior cabin size of 1.8m x 1.2m (6ft x 4ft). At ground level is a fenced wooden floor fitted out with a wooden table 70cm (28") long x 40cm (16") wide and two wooden bench seats 90cm (35") long x 25cm (10") wide. Even with the table and chairs present there is a substantial amount of space available for toy storage or a small sandpit. Outside a 60cm (24") wide wooden ladder leads to the balcony, 1.5m (5ft) off the ground. Wooden railings control access off the balcony. At one end of the balcony is fitted a 3m (10ft) wavy green slide, the other end provides access to the rock climbing wall. The swing-arm is supplied with two adjustable swings with wooden seats and is able to accommodate the Assault Course accessory on the end of the beam, as well as a single climbing rope. Further accessories for the Gate Lodge include a Clatterbridge 1.6m (63") x 0.73m (29"), a full-sized Commando net (as fitted to the York & Arundel) and its own Monkey Bars Accessory for climbing and swinging activities.

Despite its imposing appearance, the Gate Lodge PlayHouse has been designed for self assembly. The floor panels come already assembled, ready to be bolted together. The walls are made from tongue and grooved timber which in turn slides into slots machined into the uprights. The result is a strong, stable construction that accommodates expansion in the wood without splitting or warping. This is just one of the many design features that make the Gate Lodge such outstanding value for money.

MONMOUTH
ATJE 273

The single Monmouth has been designed to provide a playcentre for children of varied ages. The inclusion of a sturdy and attractive wooden staircase allows easy access for very young children to the larger 90cm (3ft) x 120cm (4ft) enclosed platform and 3m (10ft) wavy green slide. Attached to one side of the tower is an 8 rung x 4 strand commando net, on the other a tall swing arm with two adjustable height wooden swings and climbing rope. Included within the tower base is a sandpit with seats (missing in this photo). Extra play value can be provided with the addition of the Assault Course on the end of the swing-arm. To add the Monkey Bars Accessory the swing arm would need to be removed.

MONKEY BARS WITH SLIDE
ATJE 60

Our Monkey Bars follow the traditional design of sturdy horizontal support beams (9cm x 9cm (3.6") square) fitted with substantial ash hardwood rungs 4cm in diameter. Incorporated is a climbing tower and platform with the option of a 2.5m (98") wave slide to give younger children their own play area. A generous 8 rung by 4 strand commando net bolts across the tower for maximum play activity and the development of climbing skills. Stability is provided by broad lateral stabilisers at each end of the bars as well as the commando net frame on the tower end.

WITHOUT SLIDE
ATJE 60.1

In the interest of safety, we only supply ONE pair of swing hangers. These allow the swing to be placed at either end of the beam, or in the centre. If you wish to fit TWO swings, please ask your retailer to supply another set of swing hangers, but we would STRONGLY SUGGEST that you also purchase a pair of our ground anchors to provide maximum stability. We DO NOT RECOMMEND two sets of swings being fitted where the children would be over 8 years of age. As not every family will require swing(s) on their monkey bars, they are not supplied as standard, but will need to be purchased separately.

MONMOUTH TWIN CENTRE
ATJE 277

The Twin Monmouth is similar to the Arundel Twin, but with larger 120cm (4ft) x 90cm (3ft) platforms. The two towers connect via a 1.6m (63") long clatterbridge. Access to the towers can be by the wide wooden staircase, up the wooden rungs or using the 8 rung by 4 strand commando net. Depending on your garden layout, the swing arm, commando net and 3m (10ft) wavy green slide may be positioned off the two towers in a variety of ways. Beneath one of the towers is a sandpit with seats for little children. The Assault Course can be fitted to the end of the swing-arm, but the Monkey Bars Accessory needs to be fitted to the end of the tower currently occupied by the slide and the slide moved around to run parallel to the swing arm. The larger platforms and wooden roofs give a solid and impressive appearance to the Twin Monmouth, probably why this model is one of our most popular.

MONKEY BARS FOR ARUNDEL & MONMOUTH
ATJE 60.2

Based around our Monkey Bars design, we have widened the bars and beams to match the width of the tower frames. One horizontal beam is drilled for and supplied with TWO PAIRS of swing hangers should you wish to attach swings to the Bars. The width of the Monkey Bars Accessory for the Arundels and Monmouth is 90cm, the length of the Monkey Bar beams is 232cm. The Gate Lodge Monkey Bars width is 67cm, the length 233cm. Please note that swings are not supplied as standard with this accessory, as not all families will require them, or may already have them as part of their Playcentre.

FOR GATE LODGE
ATJE 60.3

If your children are over 8 years of age and you have 2 swings attached we STRONGLY RECOMMEND that a pair of our ground anchors be attached to the ends of the lateral stabiliser (the ladder end of the bars) for additional stability.

ASSAULT COURSE

ATJE 469

If climbing is your children's forte, then the assault course is the accessory to add. The swing-arm beams on all our models have been extended to incorporate the addition of this accessory utilising the existing swing-arm supports. The climbing surfaces are made from a waterproof wooden material similar to bakelite, and are fitted with six professional grips.

ACCESSORIES

Fireman's pole Rock climbing face Rope ladder Climbing rope Roman rungs and bar Swing hook Climbing stones

Wooden See-Saw

ATJE 110

See-Saws have always been fun, and ours have been designed to offer years of sensible use. The main beam is 3m (118") long and 9cm x 9cm (3.6") square, pivoting on a single ash bearing 38 mm (1 1/2") in diameter. Hidden within the support base is a steel bolt running from one side to the other, providing for a strong pivot support structure. The two shaped seats are made from a waterproof material similar to bakelite, whilst the two handles, 38mm (1 1/2") ash, are large enough to give a feeling of security and comfort when holding on.

Telescope Steering wheel Rocket rider Duoseat swing hook

Wooden Sandpit

ATJE 42

Without a doubt, one of the most popular pieces of play equipment enjoyed by all young children is a sandpit. At 120cm square (48") our sandpit has been designed to be big enough to share, not so large as to take up most of the garden and above all easily manageable. The cover folds open to provide two simple bench seats, removing the need for a separate lid or elasticated cover. The liner provided holds the sand in but allows rainwater to drain away and keeps the sandpit clean and weed-free.

Like all our products, the sandpit is self-assembly and will require pilot holes (drill-bit provided) in some pieces before screwing the prepared timbers together. Overall assembly time is about 1 hour.
