

Sectional garden buildings are constructed using 4 wall panels, each consisting of a solid frame with 16 mm boards.

These garden buildings are manufactured using Nordic pine.

Pressure-impregnation is standard.
The roof cladding is felt shingles.

The floor consists of preassembled, 16 mm boards.
Each bottom hinged window has real glass and decorative shutters. The door opens outwards to the right. A decorative fascia at the front and a plain fascia at the rear complete the attractive whole.

Our years of experience and modern machinery guarantee a top-class finished product. The care taken to find new techniques and models, as well as our concern for detail ensure first-rate construction quality.

Sectional garden buildings are only available in the standard design. They all use Quick-Pro software available from stock (see pages 52 - 53).

*Feel the itch?
A garden building appeals to all the senses,
as well as the heart.*

Vintage line

A fresh touch for your garden

All garden buildings are pressure-treated. The preassembled floor consists of pressure-treated, 16 mm boards. The front overhang measures ± 30 cm. The roof pitch is always $\pm 18^\circ$.

Black fittings give cachet to the door and to the bottom hinged windows.

A decorative fascia board at the front and a plain fascia board at the rear give the Vintage line its typical look.

The Vintage line options are listed on the back flap.
