

Living in your garden

Lugarde® offers a wide range of models in 2 different building systems: the Log-system with a wall thickness of 28 mm., 44 mm., 58 mm. and 69 mm. and the **Prima 3=1** system with a wall thickness of 28 mm. and 44 mm. Examples of both building systems are found on this page and on page 50.

The **Prima 3=1** system is a unique, by **Lugarde**® developed, system. It offers the opportunity to combine garden houses with each other and this is called **Permata**. Examples of combining our garden houses are shown on the pages 14 till 19. Various combinations can be made, like an atelier in combination with an office or an office combined with a practice etc. The nicest about this system is that if you realize after a while that the garden house you have bought is becoming too small, you can always connect a new one to the older one in a later stage.

Lugarde® has various doors and windows. All single doors are standard left handed, if you want your door to be right handed, please indicate on your order. Doors and windows marked with a T are double glazed. Also various types of roof finish are available like shingles, thatch, hexagonal shingles and copper shingles (these are covered with a layer of copper).

All garden houses/log cabins are delivered untreated, for maintenance see page 57.

For more information see page 56.

Lugarde® left you some space in our pricelist to create your own garden house and fulfil your own wishes!
